Good afternoon,

Yes, it does require power. Are you in the US? The unit has 4 motors (120v or 220v). Yes it can sit on a cement pad.

As far as the decibels...we never tested it for anything like that. I don't think that sound will be a problem...if a human can handle it...so can our equipment.

Great - so it can sit on a nice cement pad - correct? And there is no motor assist - correct? Does it require any power at all?

John,

The Eurobungy does not attach to the ground. Once everything is set, the tension it has and the weight keeps it in place.
