H Logan,

I hope this finds you well.

I want to fill you in on where we are on the project in Leavenworth. If you go to our splash page, [www.leavenworthadventurepark.com](http://www.leavenworthadventurepark.com), you will find a presentation about the project.

Nice sketch and layout!

We have always assumed that we would be adding a Soaring Eagle in either phase 1 or 2 of the project. I have attached the current site plan to show you the layout I've come up with to make sure it works. It is easiest to see the entire layout on A004.

I'll send this to Andrew and get back to you.

My recollection is that the base cost is \$275k plus the cost (approx. \$50k) for the bottom terminal. Is that still correct?

\$275k plus shipping (1 semi load + installation that could be in the \$50k range+/- on construction costs. The other thing you need to be looking at is the best way to get the needed clearance. I THINK you'll need an loading deck and that is in the \$50-74k range depending....)

Lastly, do you have any data about noise generated by the attraction? Has this ever been an issue? I recall that it basically makes almost no noise, with the exception of some whoops and hollers!

With our current braking system, we have not had a noise issue. If it is a noise issue, we can put mufflers on the air stops to quiet the air gush that you hear at a stop.

We are pushing to get our application for Conditional Use Permit in by the 18<sup>th</sup>, so as soon as you can get me the above information, I would really appreciate it.

I'll try to get Andrew's reply about the layout asap. Thank you!

Thank you!

John Sutherland
