## **Subject: Construction of the Icicle Road Transmission Main Replacement Project**

Dear Resident or Business/Property Owner,

This letter is to inform you about an important construction project that will soon take place in your area. The City of Leavenworth will be undertaking the replacement of the Icicle Road transmission main, which is currently out to bid.

The Icicle Road Transmission Main Replacement Project aims to expand the capacity of the existing water transmission main that connects the City wells to the City water system. This will involve replacing approximately 5,000 linear feet of the existing 12-inch-diameter water main with a new 24-inch-diameter water main. The new pipeline will be installed within the roadways' right-of-way (ROW) and will start at 9101 Icicle Road, stretch north along Icicle Road to US Highway 2, and then east along US Highway 2 to Mill Street.

Project work primarily includes but is not necessarily limited to installing a 24" ductile iron water main and associated fittings (i.e., water services, hydrants, and valves); providing connections to existing mains between the bridge over the Wenatchee River on Icicle Road and the intersection of Mill Street and US Highway 2; and roadway restoration.

Water outages will occur during construction. Additionally, temporary traffic control measures will be in place within the project area, which may include full road closures allowing local access only. Planned outages and traffic control information will be available on the project's webpage after a contractor is officially under contract. For more information, or to receive updates regarding the Icicle Road Transmission Main Replacement project, please visit [cityofleavenworth.com/projects](http://cityofleavenworth.com/projects).

We understand the inconvenience this may cause and appreciate your patience and understanding as we work to improve our water infrastructure. When complete, this project will increase the capacity of the water distribution system, benefit water customers directly by providing greater water pressure during the peak hour, and increase the availability of fire flow in a high-fire-risk community.

Thank you for your understanding and for being a valued resident of our community.

Sincerely,

**Andi Zontek-Backstrum, PE**  
Public Works Director

**Disclaimer:** Please note that if you are receiving this letter and are not currently utilizing city water services, any forthcoming water outages should not impact you.
